

## Hospital pharmacists call for European action to combat medicines shortages

20 June 2019

- EAHP's member organisations adopt a new position paper on medicines shortages addressing supply chain actors, national governments and European institutions.
- Hospital pharmacists demand closer collaboration of healthcare professionals, wholesalers, manufacturers and national competent authorities to combat medicines shortages have on patients.

The 35 member organisations of the European Association of Hospital Pharmacists (EAHP) adopted a new position paper on medicines shortages at their 49<sup>th</sup> General Assembly held last weekend in Edinburgh, United Kingdom. The topic of medicines shortages has occupied the members of EAHP for quite some time due to its growing impact on patient care and the work of hospital pharmacists.

Since 2012, members of EAHP have increasingly reported difficulties in sourcing medicines required in their hospitals. Consequently, the profession with the support of EAHP has been working on raising awareness about the problems that medicines shortages cause. To this end, hospital pharmacists have proactively shared information with other healthcare professionals in their working environments on how medicines shortages are managed and continuity of supply is ensured.

However, despite the early advocacy efforts by EAHP and the ongoing interventions of its members, reports on medicines shortages continued to materialise at accelerating speed throughout Europe. To establish a better understanding of the problem in European hospitals, EAHP conducted three different surveys in 2013, 2014 and 2018 which illustrated the far

reaching consequences that medicines shortages pose. In particular the percentage of hospital pharmacists reporting shortages to be an issue in terms of delivering the best care to patients has seen a significant increase in the past couple of years with over 90% of survey respondents highlighting in 2018 that medicines shortages are a problem faced in their hospital pharmacy.

To significantly lower the negative impact that medicines shortages have on the well-being of patients, EAHP's members agreed on the complete revision of its previous position paper which had been in force since 2012. In particular, European hospital pharmacists are underlining the need for concrete European action since the problems caused by medicines shortages cannot be handled solely at national level. This has also been acknowledged by a joint task force of the Heads of Medicines Agencies (HMA) and the European Medicines Agency (EMA) [1] as well as in recent EU publications, such as for instance the European Commission's policy recommendations on the future of the Union [2] issued ahead of the Sibiu summit and the Council Recommendation on strengthened cooperation against vaccine-preventable diseases [3], which recognised the issues caused by vaccine shortages.

For EAHP it is time to act now. European hospital pharmacists are consequently

- advising national governments to evaluate if their shortages measures and management systems are fit for purpose and to rectify shortcomings where and when needed
- urging national governments and healthcare organisations to evoke appropriate staffing levels in order to lower the impact that medicines shortages currently have on the overall patient services provided by hospital pharmacists
- calling on the European Commission to urgently commence an investigation of the medicines shortage problem looking at the causing factors and propose solutions that will help alleviate or solve shortages
- appealing for improved information exchange between authorities and supply chain actors as well as best practice sharing and implementation support on shortage management strategies between relevant national regulatory bodies to support patient safety
- urging the EMA and the HMA to consider the development of a comprehensive communication strategy on medicines shortages.

EAHP's position paper on medicines shortages can be accessed here [4].

EAHP's most recent report on the European medicines shortage situation is available here [5].
