

20th Congress of the EAHP Hamburg, Germany, 25-27 March, 2015

# THE USE OF PERFORMANCE INDICATORS TO IMPROVE STANDARDS, AND TO IDENTIFY 'PERFORMANCE CONCERNS' IN INDIVIDUAL PHARMACISTS

S. Amarneh, B. Olsburgh. Pharmacy Department, Laniado Hospital, Netanya, Israel.

### Background

Each pharmacist has an area of responsibility governed by specific guidelines. Using Performance Indicators (P.I.'s) to audit work and to show continuous improvement, is documented in the literature. However, the ability to identify 'performance concerns' in pharmacists is not well documented.

## **Objectives**

- To show measurable improvement in the quality of service provision.
- To identify any pharmacist(s) with 'performance concerns'.

### Materials & Methods

- The audits were performed by a pharmacist qualified in audit work. Three areas were audited-Cytotoxics, Narcotics and Galenical preparations. 52 P.I.'s were used to score various procedures on a scale of 1-10 (1-2 unacceptable, 3-4 poor, 5-7 fair, 8-9 good, 10 excellent). 6 P.I.'s were specific to prescription inaccuracies.
- The April 2014 audit covered the previous 3 months work. Audits were repeated in June and August 2014.
- Performance concerns may be indicated by no improvement in repeated audits and /or persistant low scoring P.I.'s.

### **PERFORMANCE INDICATORS - as used in the audits Excellent good fair poor unacceptable** no. of observations /notes 10 9 8 7 6 5 4 3 2 1 **CYTOTOXIC PREPARATIONS (preps.) GALENICAL PREPARATIONS** Checking that the external package is not damaged General cleanliness of area of preparations The worker wears gloves when opening the package The weighing machines are calibrated Storage is suitable and well labelled Laboratory tools are relevant The materials have not expired A boxed set for cytotoxic spillage is present The materials are labelled as required Transportation as required Instruction of a new worker is documented in a special file The materials are stored as required The presence of MASTER FORMULA A new worker is instructed regarding cytotoxic spillage Performance of medicinal checking as protocol **Prep. Requiring Prescriptions Registration Book** Checking and calibrating the laminar as protocol Registration of prescription details Required and necessary materials only Registration of the expiry of materials Registration of the expiry of the prep. Clearing the room as required for aseptic preparation The cleaning workers wear clothing as per protocols Signature of two pharmacists Cleaning is documented Registration of the method of preparation The prescription is written as per protocols Labelling Douple checking of preps. **Division Registration Book** Preps. are documented in special book with signature The date of division Clothing worn as per protocols The number of preparations The name of preparation **NARCOTICS** The actual stock matches the documentation: Registration of materials Excel program The method of preparation Tafnit program Labelling The expiry date is valid Signature of pharmacist The drugs are stored appropriately The Prescriptions The narcotics books are signed as required The prescriptions are present Balancing of movements at the end of the month: The prescriptions are written as required Registration of the preps. number on the prescription Excel program Tofoit mus

| lafnit program                                       |  |  |  | The processes are carried out as per guidelines |

| The prescriptions are writen as required             |  |  |  |                                                 |
| Returning narcotics from departments are documented: |  |  |  |                                                 |
| Excel program                                        |  |  |  |                                                 |
| Tafnit program                                       |  |  |  |                                                 |
| Monthly summary documented as per regulations        |  |  |  |                                                 |

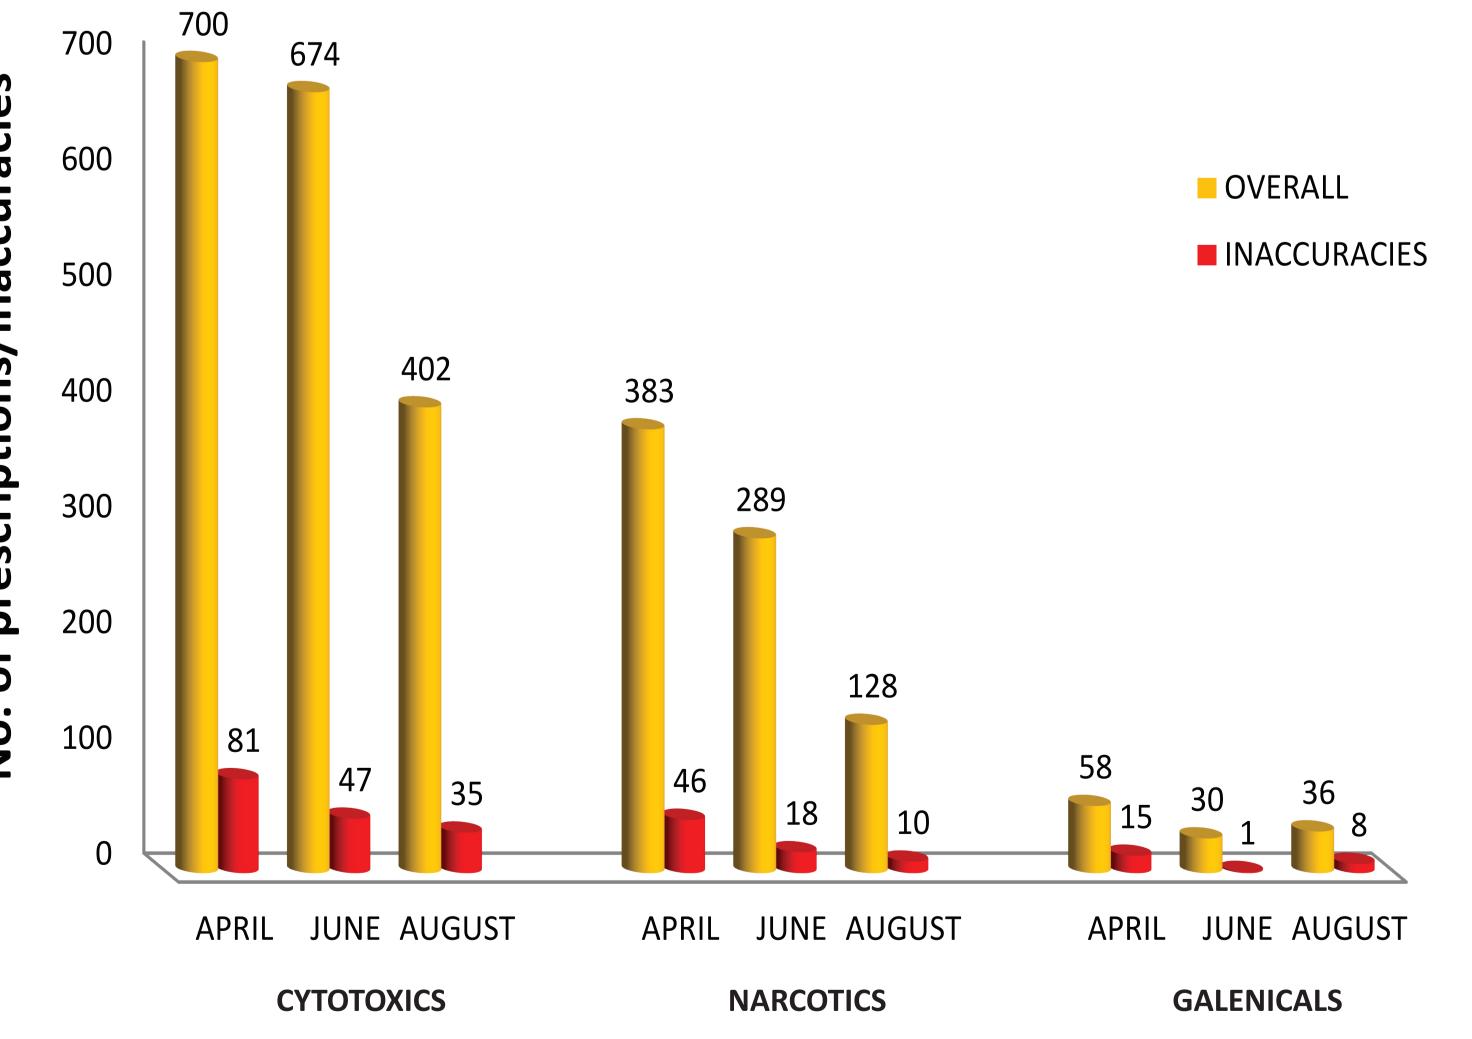

### **Results and Discussion**

- The April audit showed baseline achievements. Cytotoxics had a lower baseline value.
- The June audit showed general overall improvement in Narcotics and Galenicals. Cytotoxics improvement was less.
- The August audit showed that the good-excellent improvement in Narcotics and Galenicals was maintained, and it showed no improvement in Cytotoxics.

| • | The percentage of inaccurate prescriptions or orders received |
|---|---------------------------------------------------------------|
|   | by the Pharmacy department in Cytotoxics and Narcotics during |
|   | the audit period ranged from 7-12%.                           |

### CYTOTOXICS, NARCOTICS & GALENICAL PRESCRIPTIONS PROPORTION OF INACCURACIES

| AUDIT RESULTS 2014 |                   |       |     |          |     |          |     |  |  |
|--------------------|-------------------|-------|-----|----------|-----|----------|-----|--|--|

| GOOD               |                   | 10    | 42% | 2        | 8%  | 5        | 21% |  |  |
| EXCELLENT          |                   | 7     | 29% | 21       | 88% | 18       | 75% |  |  |

### Conclusions

- ✓ Using P.I's led to improved standards within an 8 month trial period.
- The area which improved least was 'Cytotoxics'. The reason has not been determined but this may indicate a performance concern, which requires further investigation.
- ✓ The rate of inaccurate prescriptions reflects an educational issue.
- Incorporating P.I.'s into hospital departments would contribute to improving standards, and may identify performance concerns in health care
  professionals.

### Aknowledgments

The authors wish to thank all personnel in Laniado Hospital who participated in this study.
