WHAT DO OUTPATIENTS REQUIRE FROM PHARMACEUTICAL CARE CONSULTATIONS?

E. García Benayas¹, M. de la Cruz Vallejo¹, S. Peña Cobia¹, E. Díaz Gómez¹, P. Novo González².
1. Hospital Universitario Severo Ochoa (Leganés, Madrid) 2. Hospital Nuestra Señora de Guadalupe (La Gomera, Islas Canarias)

BACKGROUND AND IMPORTANCE

The goal of pharmaceutical care is to provide patients with the support needed to follow their treatment correctly and safely.

AIM & OBJECTIVES

To analyze structured data collected from outpatients pharmaceutical care consultations.

MATERIALS & METHODS

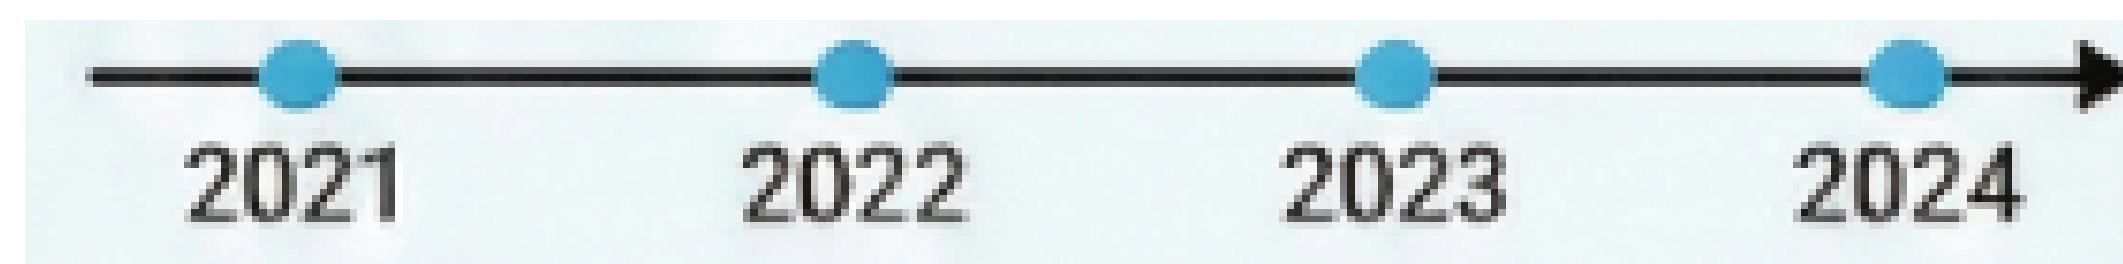

Observational, descriptive and retrospective study

Analysis of electronic medical records from a secondary care hospital.

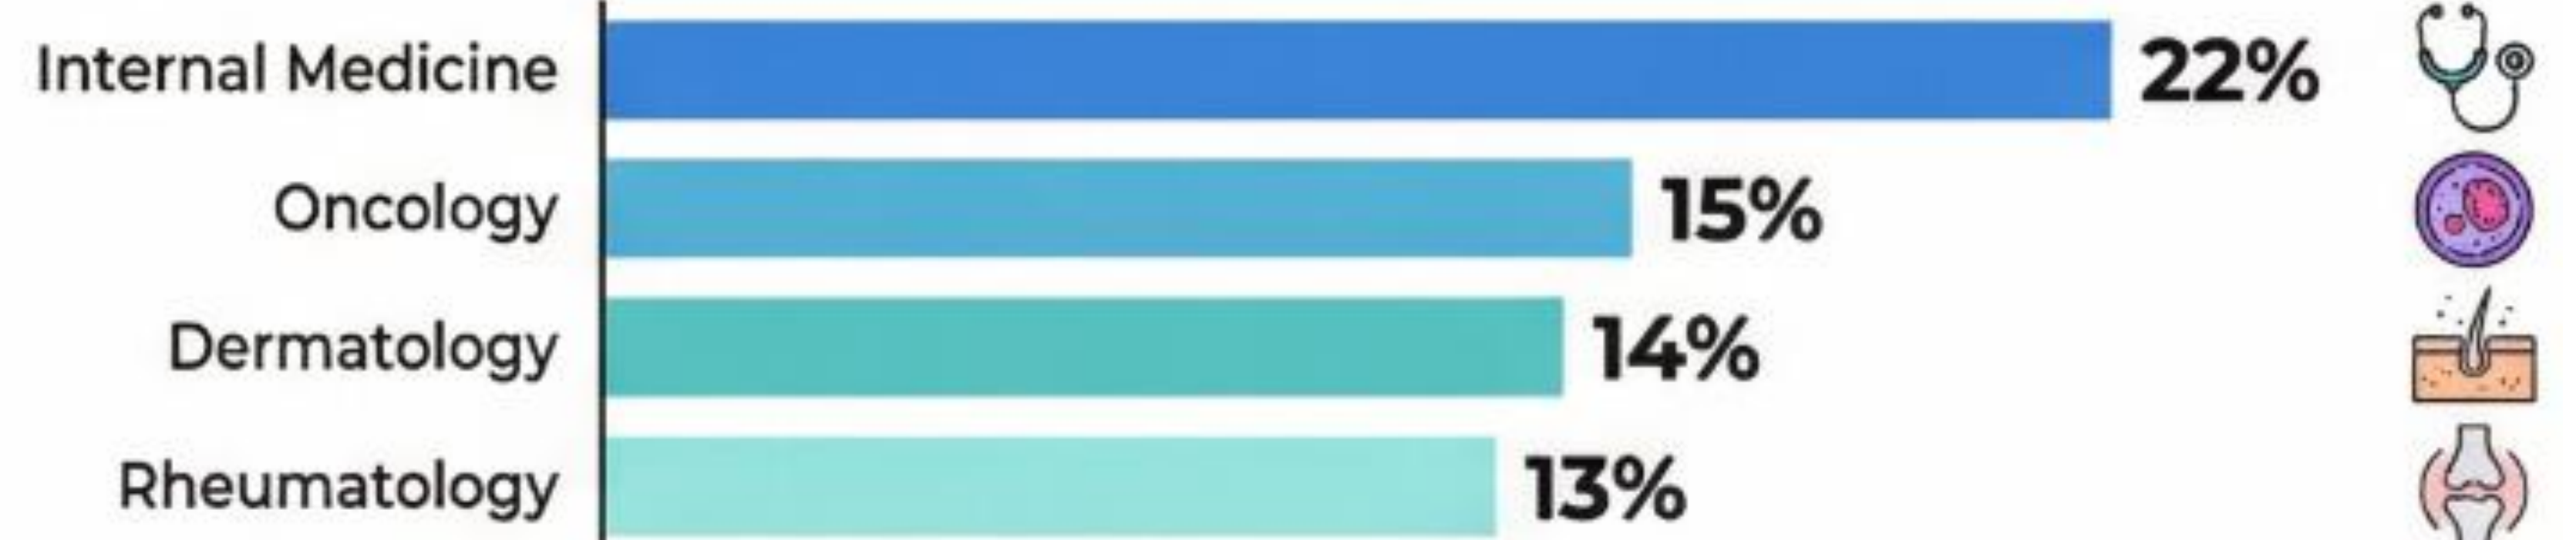

Key variables collected

- Training for self-administration
- Reason for consultation
- Medical service
- Drug type

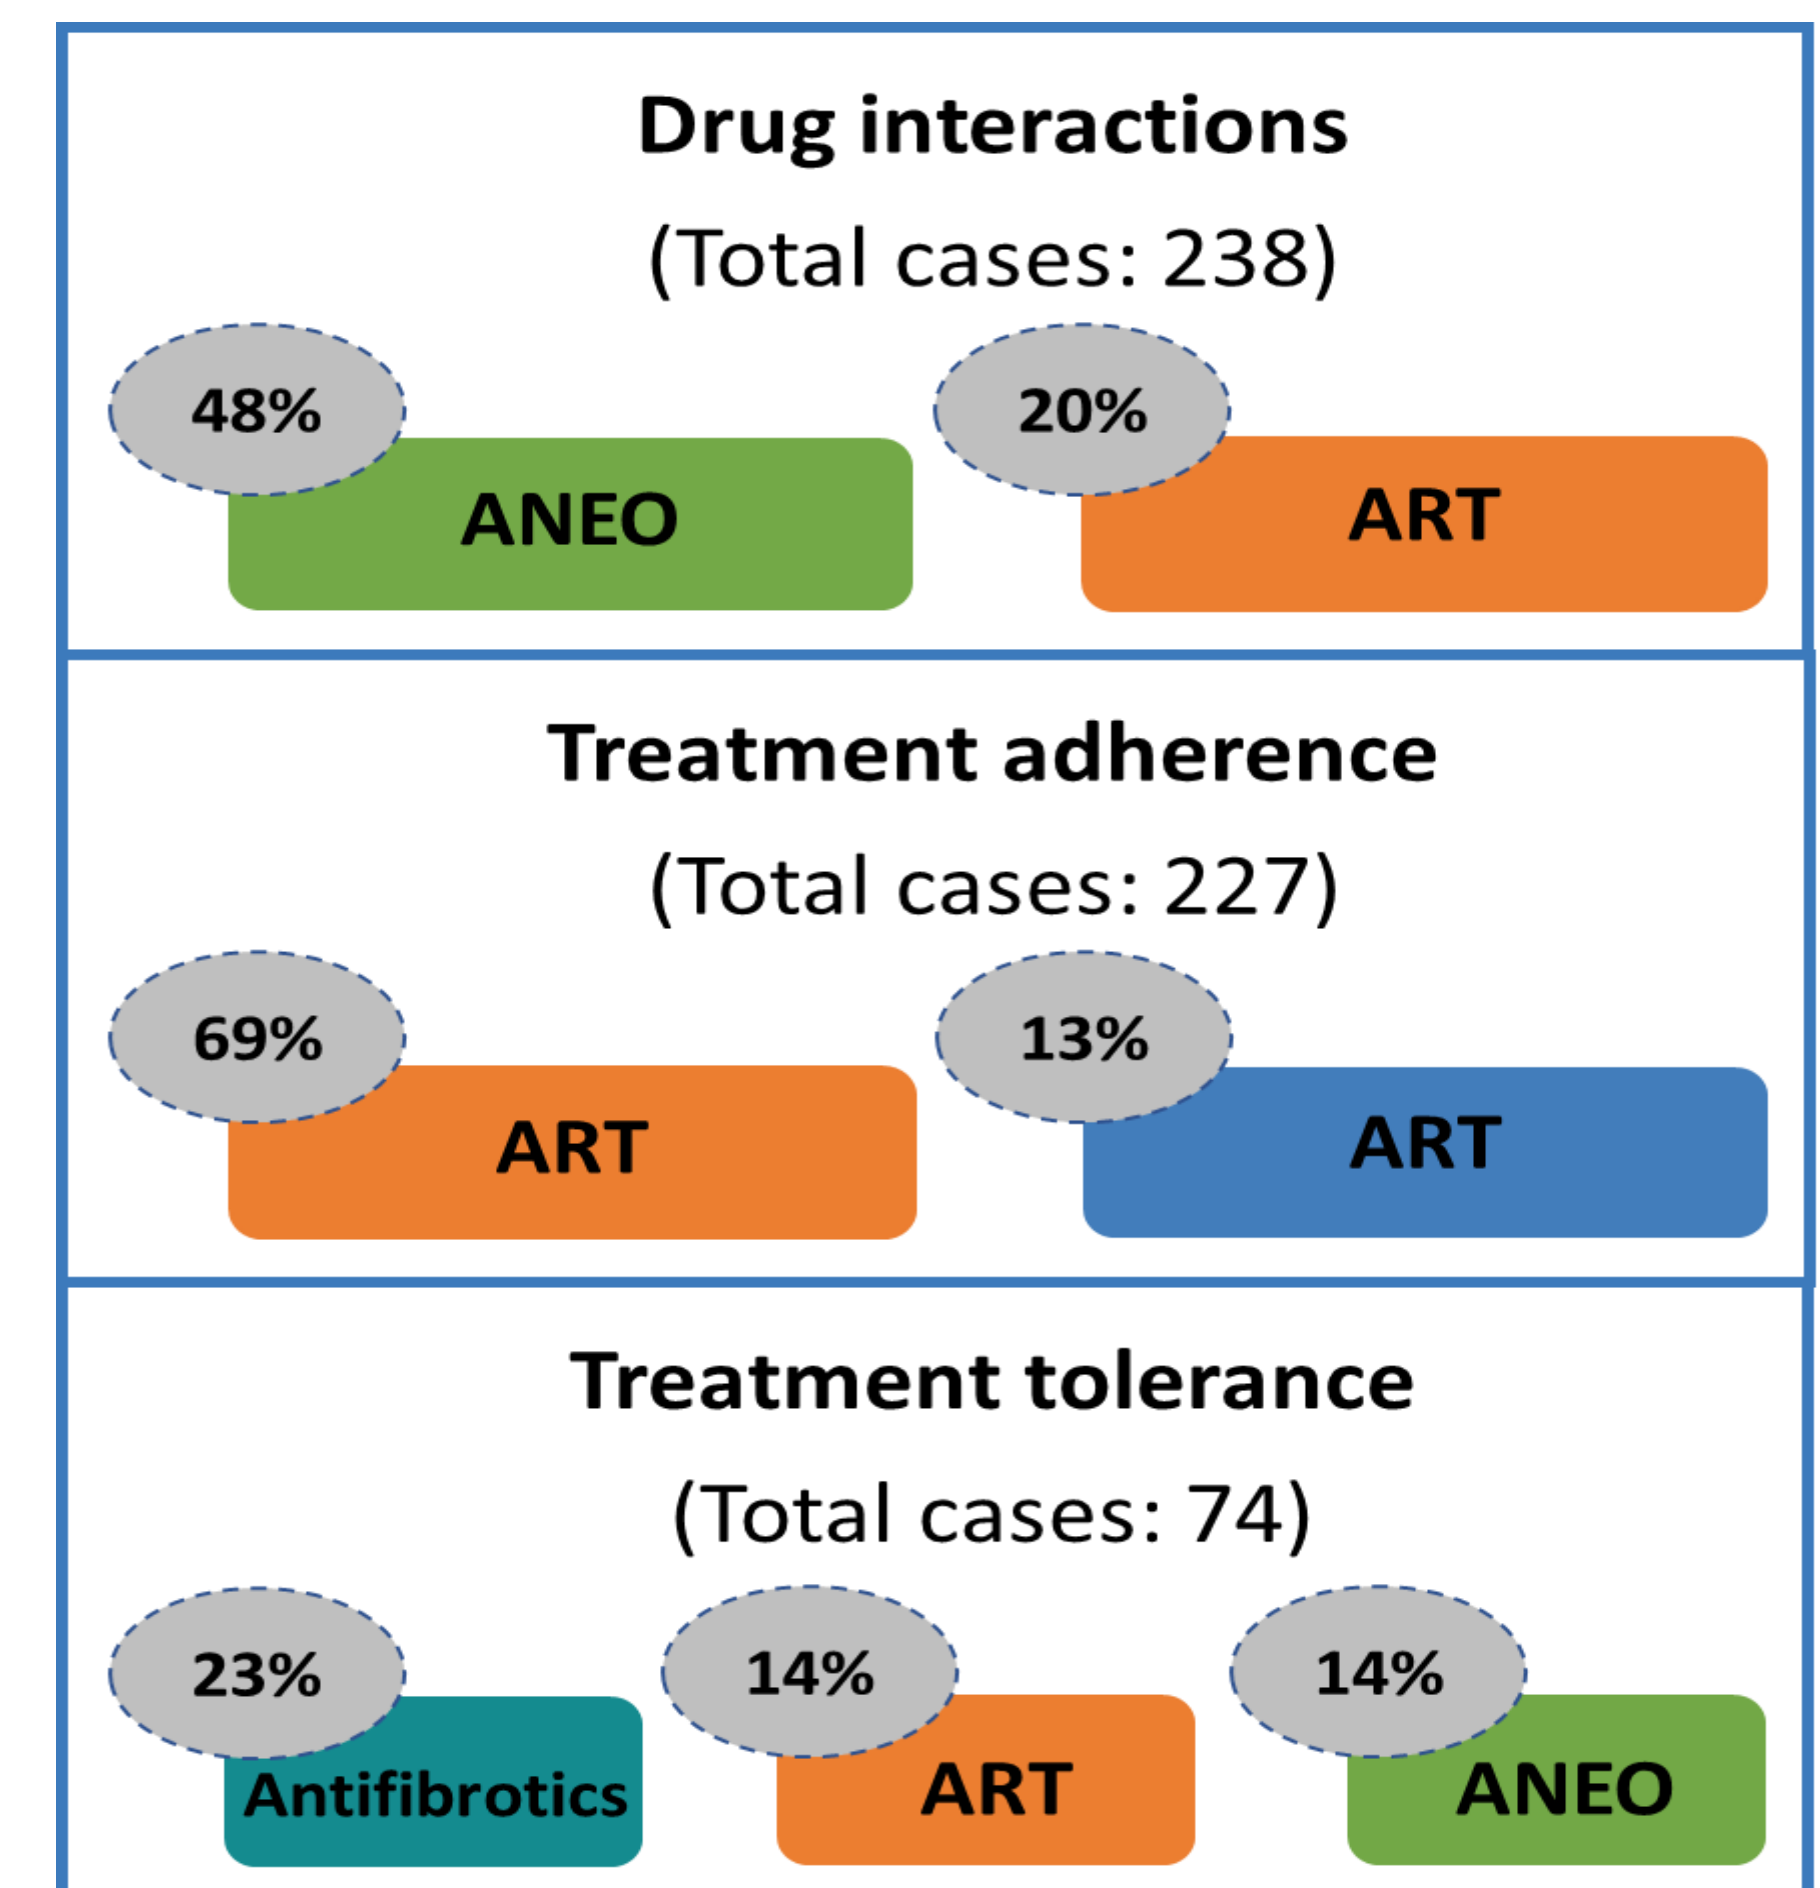

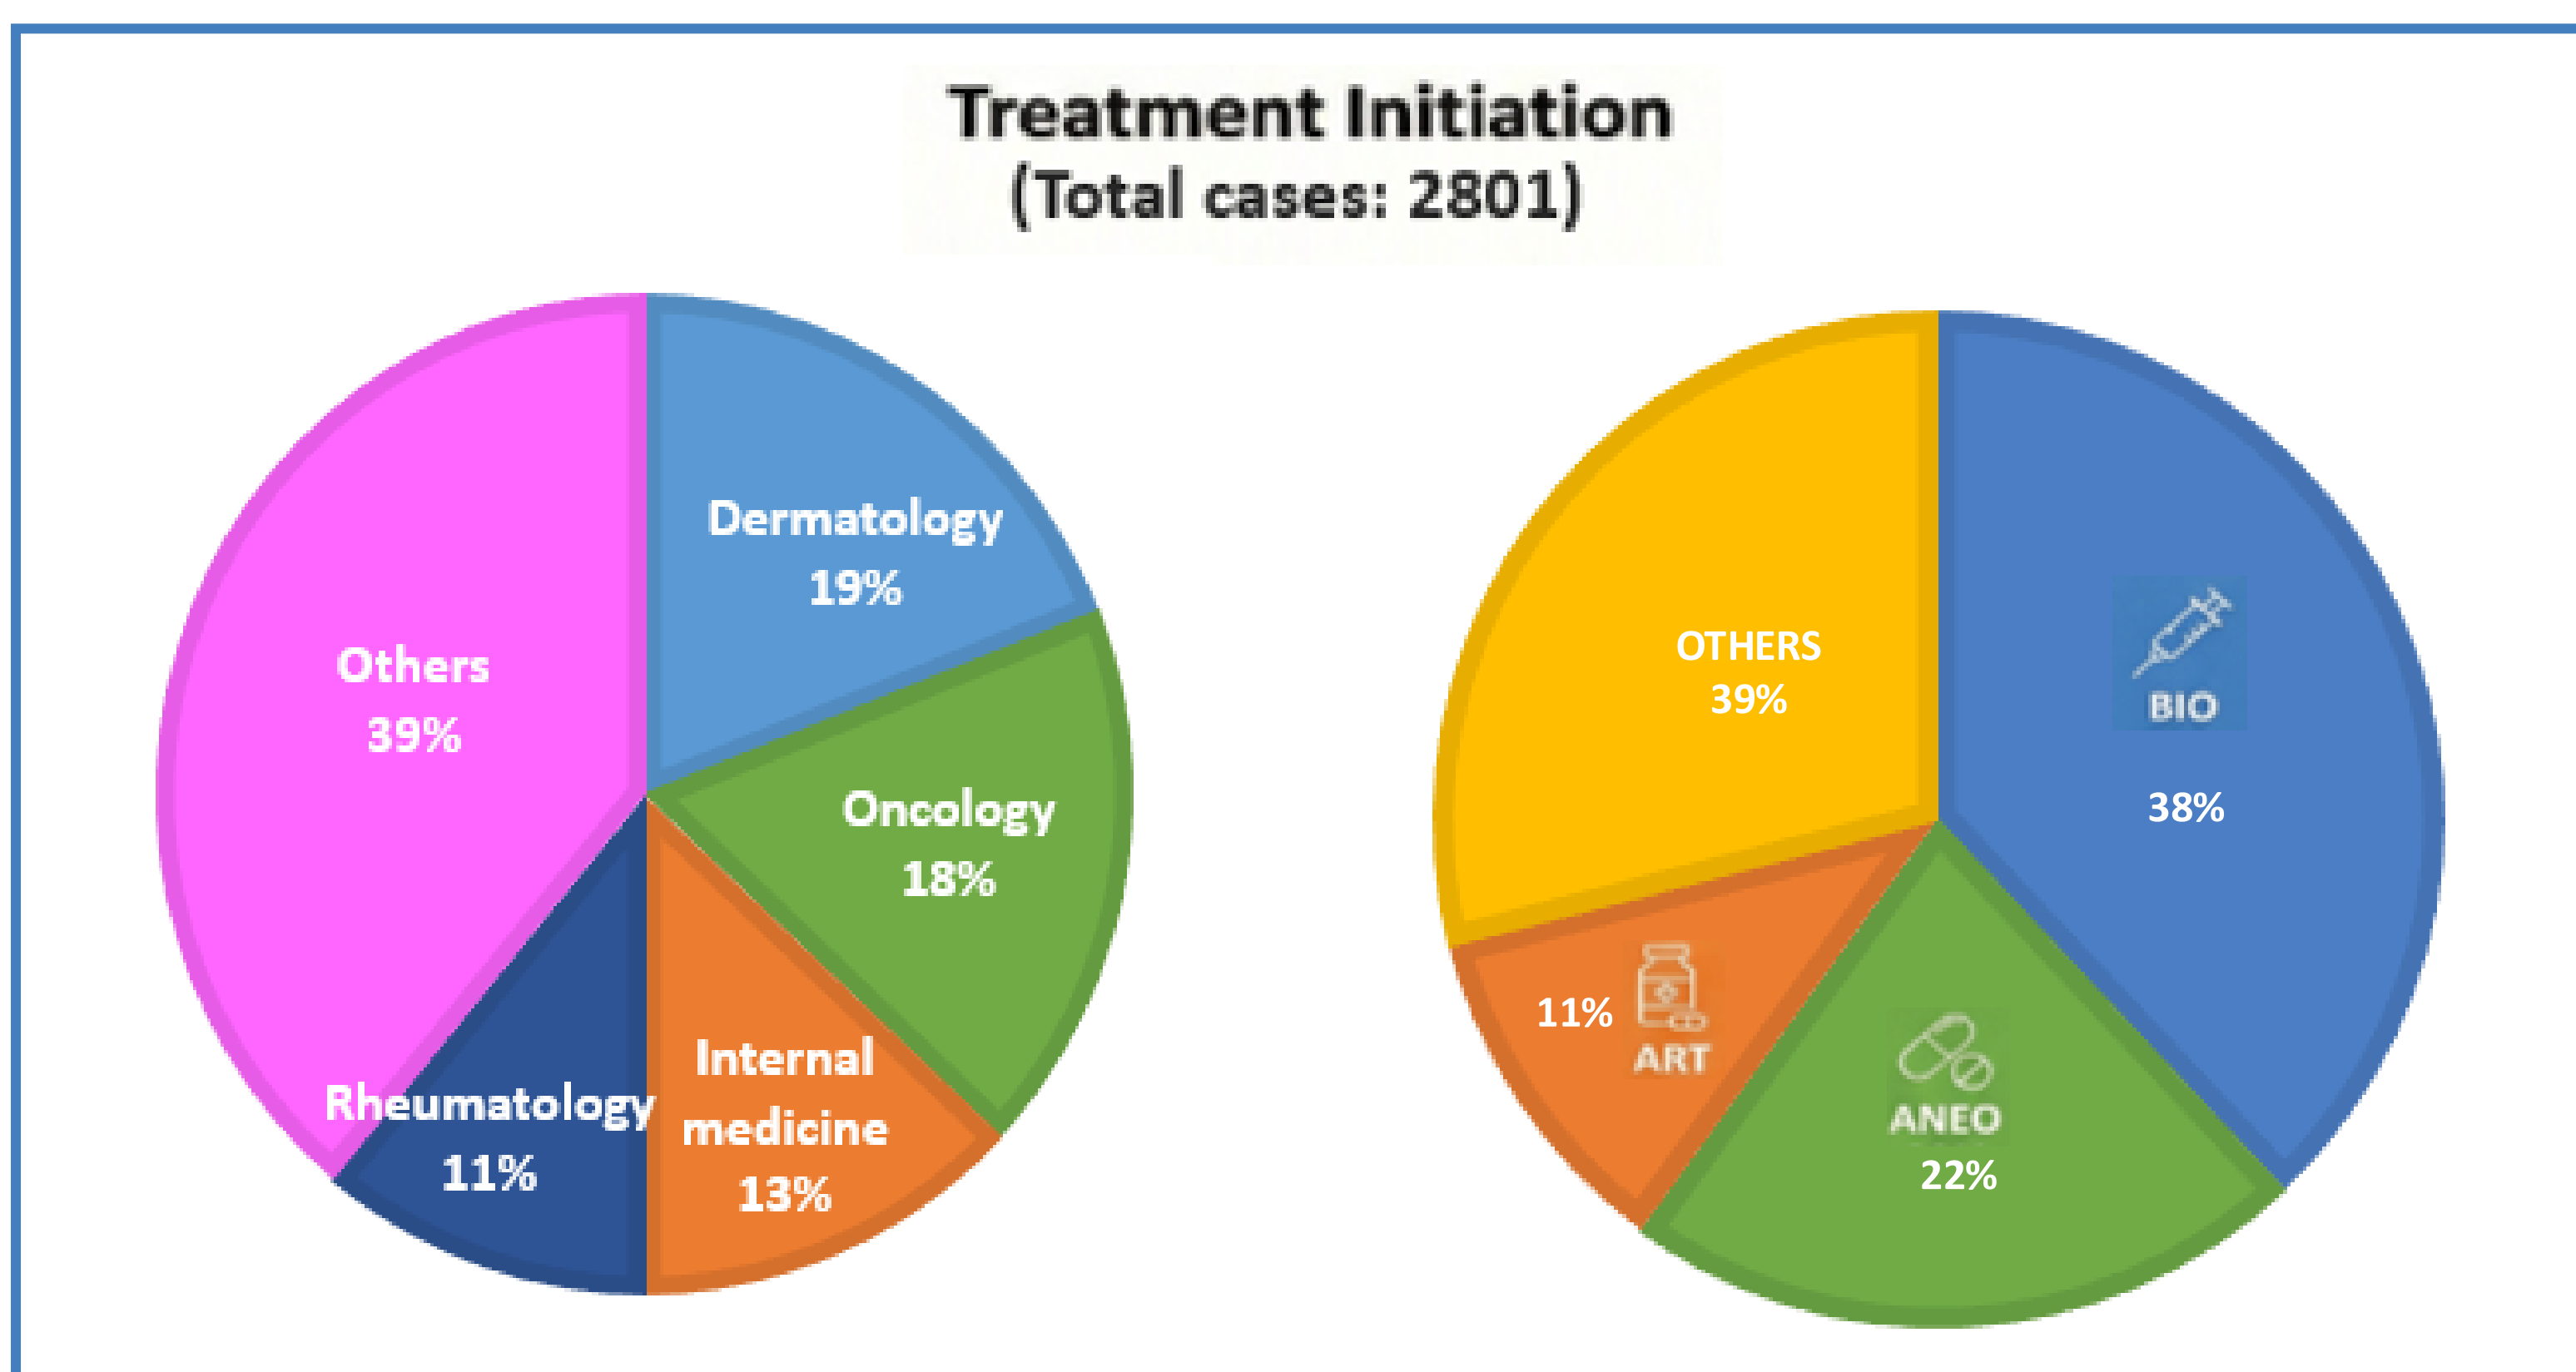

RESULTS

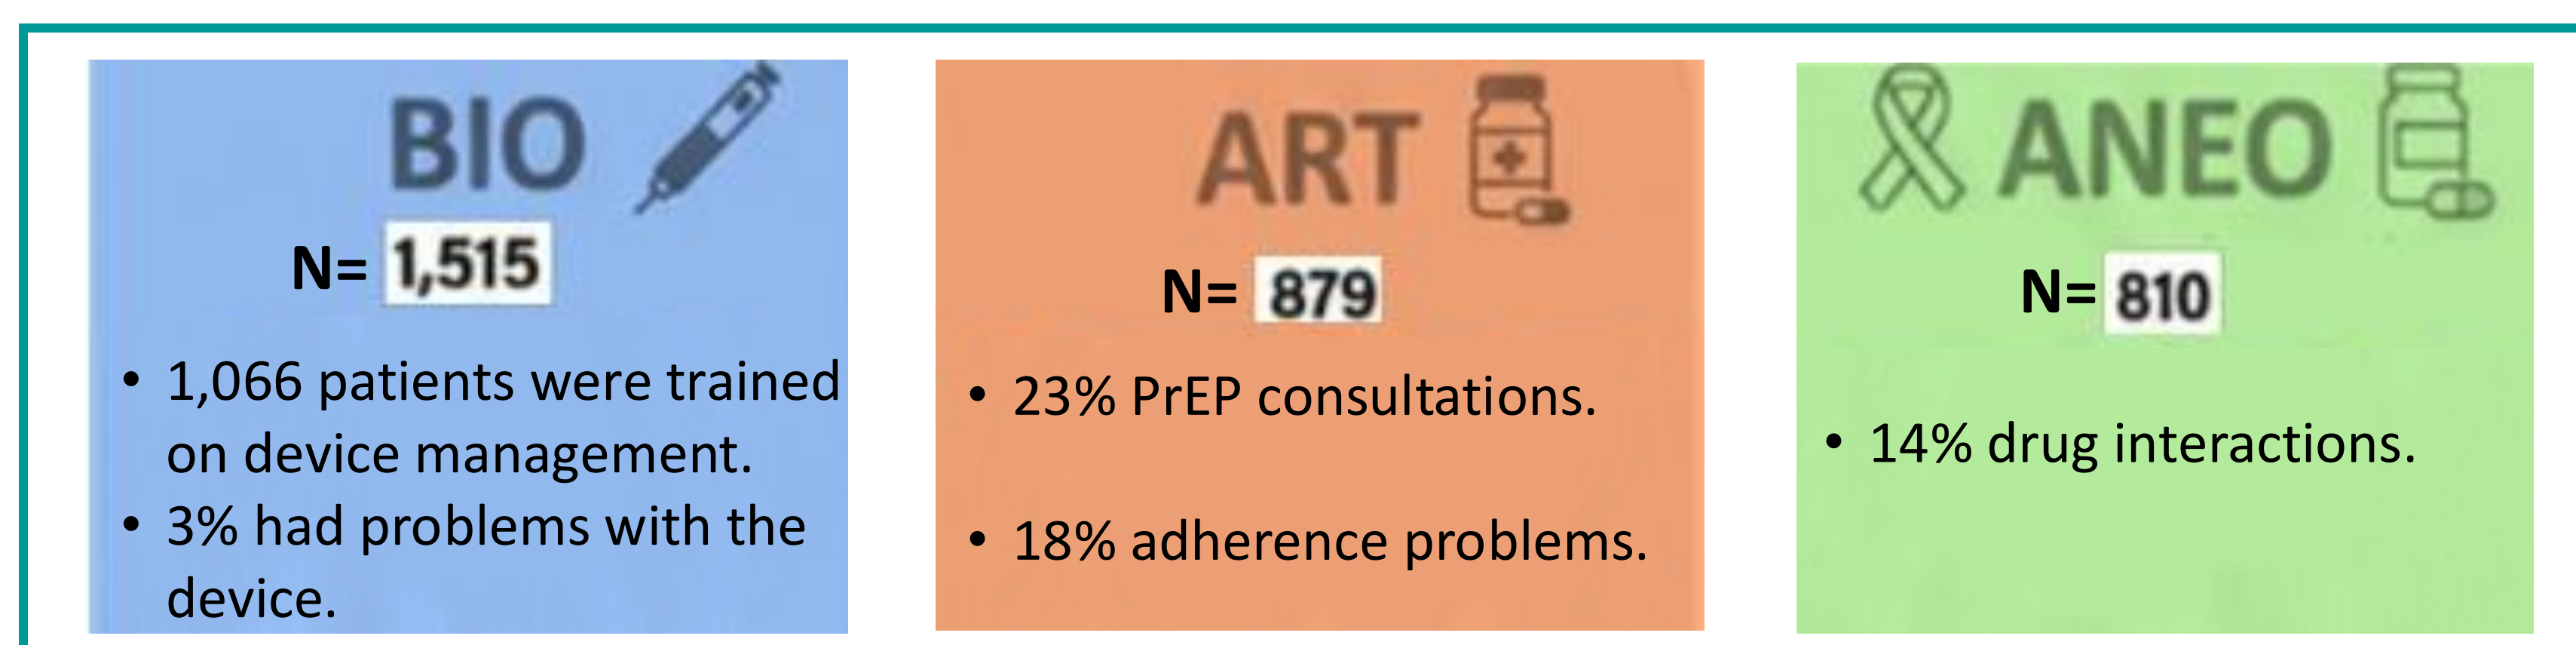

4,345
Total Consultation Records

REASONS FOR CONSULTATION

BY THERAPY

ANEO: Antineoplastic drug
BIO: Biological drugs
ART: Antiretroviral therapy

CONCLUSION AND RELEVANCE

• Greatest demand for pharmaceutical care comes from patients on **BIO, ART** and **ANEOs**.

• **Starting new therapy** is the most resource-intensive activity for pharmaceutical care, followed by follow-up, drug interactions and adherence.

• 25% of all consultations involved training patients on **self-administration** of their medication.
