

LESS-CHRON FOR DEPRESCRIBING IN NURSING HOME RESIDENTS

5PSQ-101

ATC code: -

M.C. SÁNCHEZ ARGAIZ¹, M.R. CANTUDO CUENCA¹, S. GUIJARRO HERRERA², R. ALVAREZ SÁNCHEZ³, B. MUÑOZ CEJUDO¹ ¹SAN AGUSTÍN HOSPITAL, HOSPITAL PHARMACY, LINARES JAÉN, SPAIN. ²VIRGEN DE LAS NIEVES UNIVERSITY HOSPITAL, HOSPITAL PHARMACY, GRANADA, SPAIN. ³CAMPUS DE LA SALUD HOSPITAL, HOSPITAL PHARMACY, GRANADA, SPAIN.

MULTIMORBIDITY

poorer health outcomes

POLYPHARMACY

Drug-related problems

Hospital admissions

blood and cardiovascular system drugs

LESS-CHRON criteria (List Evidence-baSed depreScribing for CHRONic patients criteria):

a list of 27 drugs and specific clinical situations that set an opportunity for deprescribing in patients with multimorbidity.

To stop, substitute or reduce the dosage of those drugs that under certain clinical conditions can be considered unnecessary or inappropiate.

Objectives: The aim of this study was to review all the medical treatments an clinical situation of the institutionalized patients in a nursing home, using LESS-CHRON criteria and analyzed the pharmacist interventions.

Methods or Study Design

Cross-sectional study in June 2018. We included all the nursing home residents older than 65 years in a residential care center linked to a hospital pharmacy. We reviewed with the physician responsible the pharmacological treatment and clinical situation of the residents to assess the benefits and risks of medication withdrawal, then we valued the acceptance.

Results:

√ 55 nursing home residents

√ 50% men

✓ Mean age: 82,5±9 years old

- ✓ Charlson comorbidity index ≥5: 73%
- ✓ Mean drugs prescribed per patient: 8,5±4,4

clinical review and evaluation process with the physician

■ digestive system drugs genitourinary tract drugs central nervous sytem drugs 41% 36% 18% 5%

We detected 39 inappropiate prescriptions by LESS-CHRON criteria:

- ✓ Acceptance intervention rate to reduce dose or stop medication: 26%(10)
- Inappropiate prescription without any changes in treatment:

74% (29)

22 had a clinical explanation

Discussion/Conclusions: LESS-CHRON criteria is a suitable tool for clinical practice to select which patients can benefit from deprescribing. They can avoid several adverse events related to drugs, but it requires a good knowledge of the clinical history and a work in common with physician. As we can see most of the inappropiate prescriptions with no modification in treatments were clinically justified.
