

Four major activities and achievements of the hospital pharmacists in **NORTH MACEDONIA** in the past year were:

The EAHP project “Implementation of Antibiotic Reconstitution/Dilution Database in Serbia, Croatia, Slovenia, Bosnia and Herzegovina, North Macedonia and Montenegro in Co-Operation with Spain“ was finished and brought to life.

Working meeting was held to discuss the role that hospital pharmacists played in the COVID 19 pandemics and a questioner based study is planned to quantify the work and involvement of the hospital pharmacists.

In the upcoming Law on Health Care the Pharmaceutical Chamber succeeded to make a change that pharmacists with specialization in biochemistry are allowed to be chief responsible persons in the biochemistry labs in the hospitals.

After long negotiations with the Autonomous Trade Union of the workers in Health, Pharmacy and Social Care a battle was won – hospital pharmacists in state hospitals will get equal payment as MDs without specialisation.
