CONVERSACIONES CON EL PACIENTE

What was done?

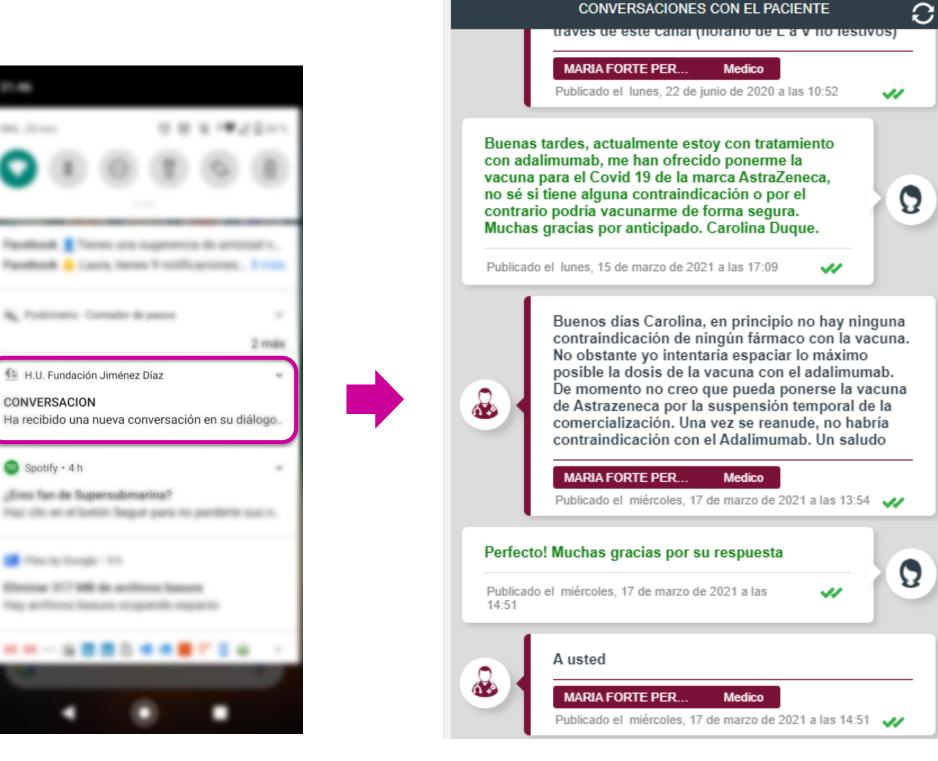

ISG11239

A software tool called "Web Dialogue" was developed within the e-health portal of our hospital. It allows outpatients to communicate with the pharmacist using a chat box where they can write queries about:

Drug interactions, adverse effects or any other concerns about their hospital dispensed treatment, as well as about other medications or herbal products.

"Web dialogue" is available to all the outpatients who receive medication from our pharmacy service.

A pharmacist answers the queries within 24 hours, from Monday to Friday.

How was it done?

1. High volume of phone calls from patients

2. Large number of inquiries by email

3. We needed a way to record patient queries in the clinical history ensuring data privacy

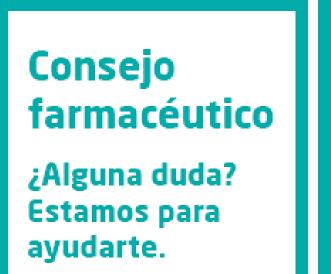

March 2020 Beginning of the state of emergency in Spain October 2019 2017 Implementation of Web Development **Patient Portal**

Spread among patients: through posters and an informative video

Paso 2

En caso de duda

Paso 1

Dentro del Portal del paciente

Si tienes alguna duda o consulta sobre tu medicación de dispensación hospitalaria, interacciones, efectos secundarios, y otros medicamentos o productos de herbolario y parafarmacia, el Servicio de Farmacia Hospitalaria del Hospital se encuentra a tu disposición para ayudarte.

Un farmacéutico te responderá en menos de 24 h a través de este canal (horario de L a V no festivos)

Paso 3

Preguntar dudas a nuestro

Dialogue in our hospital's by IT medical services department

Pharmacy service: 8,000 outpatients

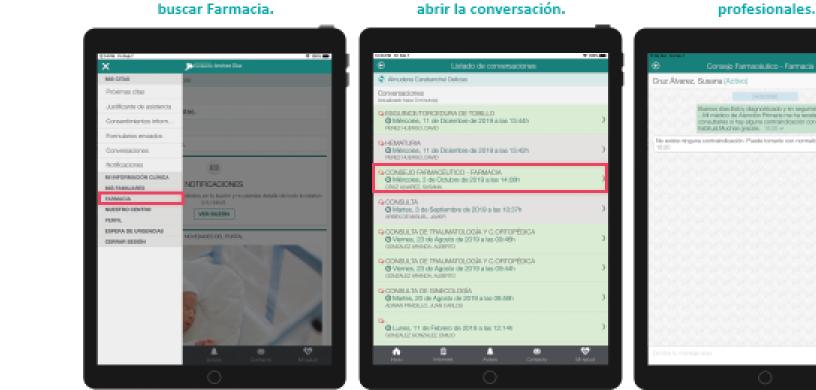

Request for opening of Web Dialogue to all pharmacy outpatients

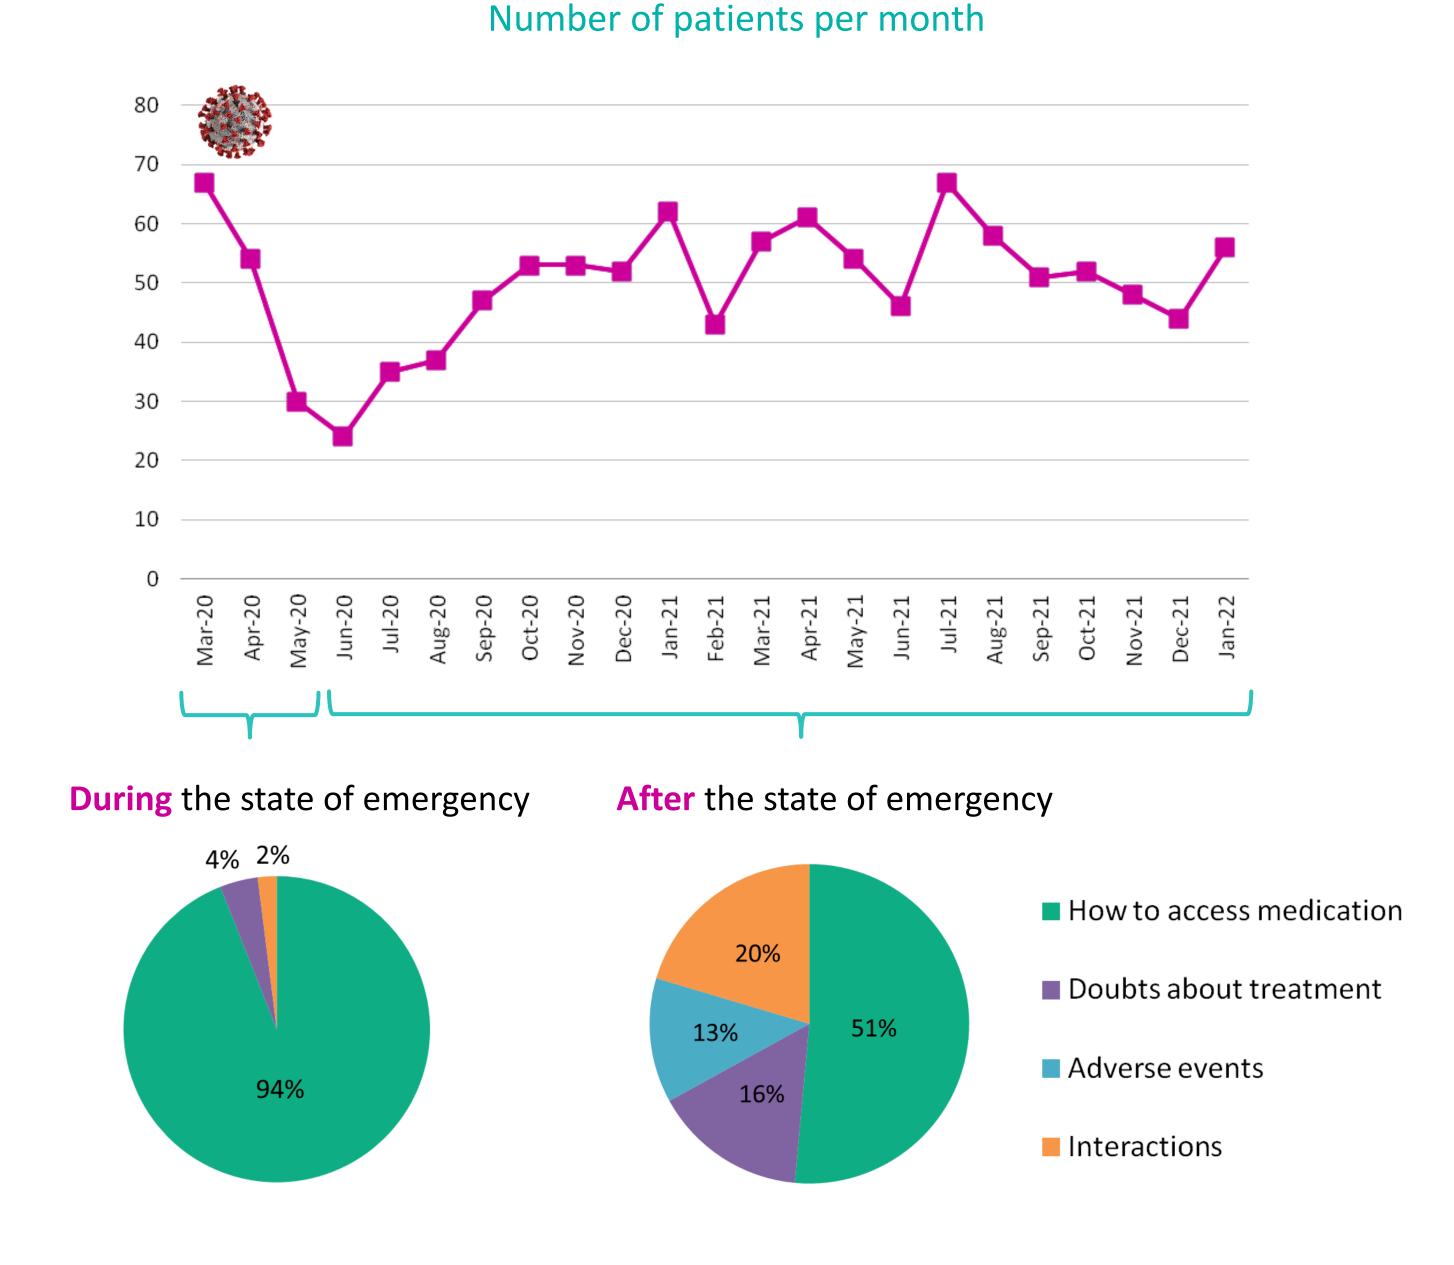

(Pharmaceutical advice)

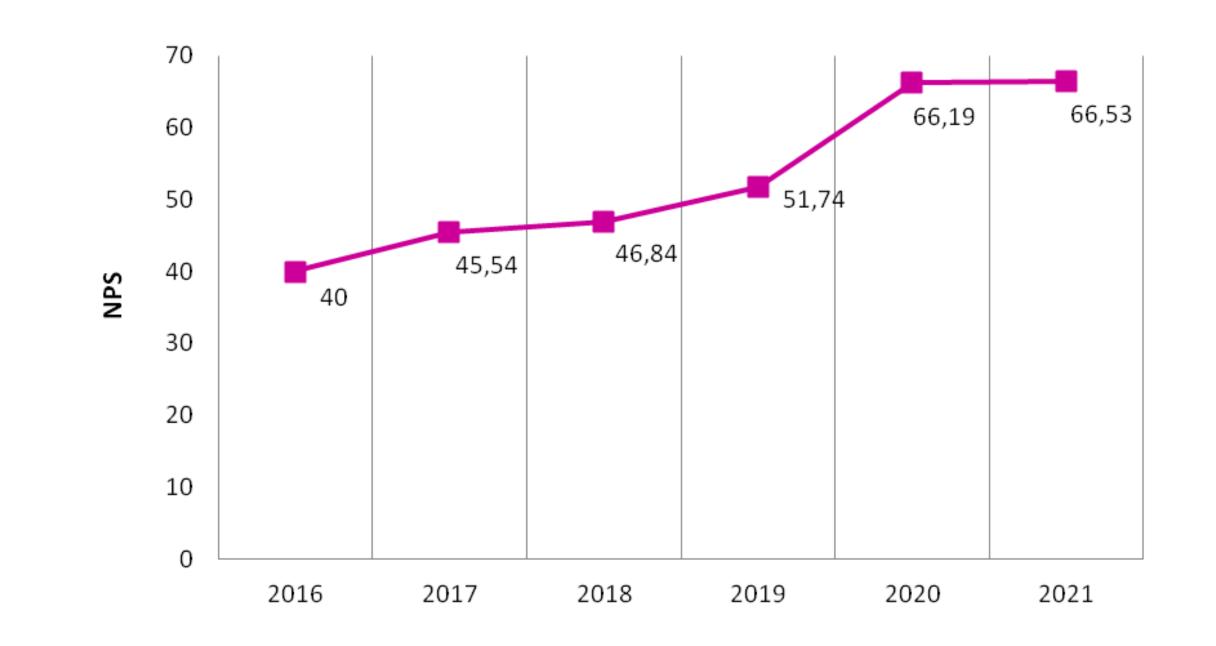

What has been achieved?

Evolution of Web Dialogue in our service

Anual evolution of Net Promoter Score (NPS) Patient loyality in our service: >60 pts \rightarrow Excellence

What next?

Some of our ideas for the future are:

- 1. The possibility of selecting the type of inquiry and the interlocutor (adminstrative staff/pharmacist) by the patient.
- 2. Create algorithms for the automatic response of certain questions.
- 3. Carry out Big Data research studies.
