1 Background and importance

Interprofessional collaboration to promote patient safety
 +
 Misuses in using enteral nutrition tubes
 =
 Innovative framework to create a pair between nurse and PT to carry out a clinical audit on the correct use of nasogastric tubes and the pharmaceutical forms administered in accordance with the guidelines.

2 Aim and objectives

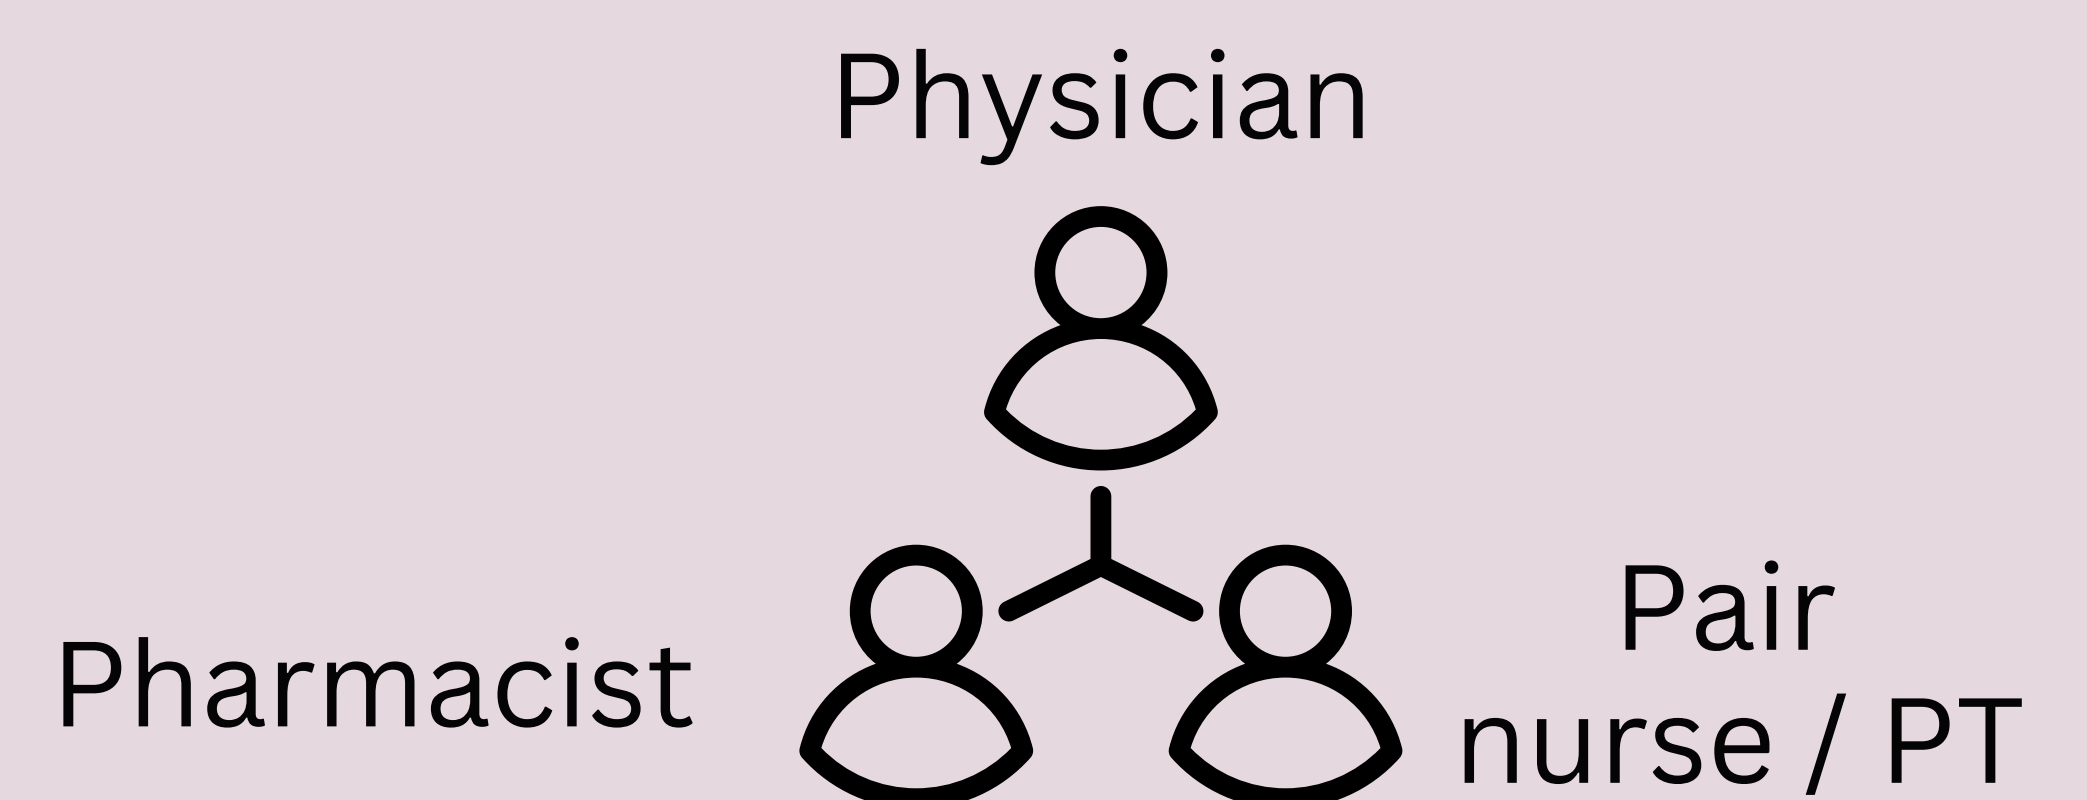

Pharmacy technician Nurse

PAIR

Improve PT's skills and relevance of the audit form

3 Materials and methods

WORKING GROUP

Elaboration of a **training support** and a **room of errors**

Comparative analysis between trained group and control group

TG (6 PT)

Training with a support
 +
Simulation with a room of errors

CG (8 PT)

No training with a support
 +
No simulation with a room of errors

Evaluation with a questionnaire
Results comparison

4 Results

	TG	CG
Technical competence	74%	24%
Ability to observe misuses	85%	46%
Barriers to optimal collaboration	92%	72%
Opinion	100%	93%

5 Conclusion and relevance

- Training clinical audit is necessary before carrying out a clinical audit
- Synergy nurse/PT allowed to enhance PT's practical skills
- Beneficial work to develop clinical pharmacy
